Nadajnik wideo VTX MAMBA Ultra 1000 M3

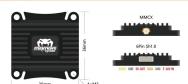

Cena brutto	159,99 zł
Cena netto	130,07 zł
Dostępność	Aktualnie niedostępny
Czas wysyłki	1 - 3 dni
Kod producenta	JH60301
Kod EAN	JH60301
Producent	DIATONE

Opis produktu

ULTRA 1000

User's Manual

	Port	Difinition	Wiring		Port	Difinition	Wiring	
	7-36V IN	7-36V DC Input	Connect to the 7-36V output	DATA VT		VTX IRC	Connect to the UART TX port of FC. Switch on th IRC protocol to concrol the Channel, Band, and	
Г	5V-OUT	5V/1A(Max) Power output	5V power supply for other devices		DATA	Signal in	Power of the VTX via OSD	
Г	GND	Ground wire	Connect to the power ground wire	Г	VIDEO	Video in	Connect to the Video Output of FC	

Connect Tiny Ultra to the UART TX port of FC.
Switch on the IRC protocol to control the Channel, Band, and Power of the VTX via OSD

Follow the steps to set the VTX control (For Betaflight)

1.Connect the C and VTX according to the diagram. Swirch on the "OSD" function

A The antenna must be proper installed (Power on the VTX without the antenna may cause damage to the VTX)

- ∆ Caution:
 • Channels marked red require a HAM certificate. Please fill in "0".
 or load " 'Ultra no Namijson" if you are not authorized.
 Some frequencies and transmitting power may violate local laws in some countries or regions. Please use them according to the actual situation.

- Channel/Power Adjustment

 I. Make sure the VIX has been connected and to FC and set correctly.

 2. Power on the VIX and FC, turn on video receiver and transmitter.

 3. Search for the current VIX channel by Video neceiver.

 4. Move the sick as follow: THBOTTLE MID+VAW LETF-PTICH UP to enter OSD menu.

 5. Switching PTICH up(down to choose menu option. Now the cursor to 'FEATURES' and stir Roll sick right to enter 'YIX' menu.

 6. Move the cursor to 'SET'. Roll, stick right to enter 'SET' and choose 'YES' to save the settings. The VIX will switch to the chosen channel.

 7. Adjust the VIX receiver to current channel.

 8. Save & Exit the OSD menu.

Default Srtting:
The YTX has been set to 5740 and 25mW as deafult. The FREQs marked by red are locked(frequency table below) Please unlock
The YTX by following steps for full functions. Unlocking the YTX may cause legal risks. The company is not responsible for the risks.

Unlock:
Press and hold 15 seconds to lock/unlock
all FREQs and power
Locked: R1 LED (red) stays on
Unlocked: R1 LED(red) flashes

- Pit Mode:
 The power level will be set to 3mW when pit mode on.
 The VTx can be set almost without affecting others.
 Activate Pit mode.
 1. Double click the button to activatePit mode(Red R1 led off)
 Double click again to describate pit mode
 2. Activate pit mode in 500 menu

 1. The power pit mode in 500 menu

 2. Activate pit mode in 500 menu

 2. Activate pit mode in 500 menu

 3. The pit mode in 500 menu
