Opis produktu

Narzędzie do zdejmowania śmigieł NewBeeDrone ProppyPop

This will be the last propeller removal tool you will ever need!

The **NewBeeDrone Whoop PropyPop Tool** is an injector style removal tool that pulls up press-fit whoop propellers on both 0.8mm and 1.0mm shafts.

The swappable tips (0.7mm and 0.9mm in diameter) ensures compatibility with different motor shafts, without getting stuck in the propellers.

High precision anodized CNC aluminum body ensures smooth sliding motion and minimizes wobble when the shaft is being pushed down. This sturdy tool is built to last.

Instruction:

1. Make sure to use the 0.7mm tip on 0.8mm motor shafts, 0.9mm tip on 1.0mm motor shafts.
2. Slide the thin metal piece in between the motor the propeller, make sure the cutout on the metal piece hugs around the motor shaft once inserted.
3. Hold the tool like an injector, line up the removable tip with the motor shaft and push down the top with your thumb.
4. Keep applying the force until the propeller is pulled up.
5. Congratulations! You have successfully removed that stubborn prop!

What's included:

1x NewBeeDrone Whoop PropyPop Tool (with 0.7mm Tip)

2x 0.7mm tip

3x 0.9mm tip
