Stack SpeedyBee FC F405 V4 + ESC BLS 60A 30x30

Cena brutto	**319,99 zł**
Cena netto	**260,15 zł**
Dostępność	**Aktualnie niedostępny**
Czas wysyłki	**1 - 3 dni**
Kod producenta	**F4V4-60-STACK**
Producent	**SpeedyBee**

Opis produktu

Stack SpeedyBee FC F405 V4 + ESC BLS 60A 30x30

SpeedyBee
SpeedyBee F405 V4 BLS 60A Stack
Real 60A
5V 3A BEC
9V 2A BEC
60A
* The DJI Air Unit plug is completely compatible with DJI O3/RunCam Link/Caddx Vista/DJI Air Unit V1, no wire is needed to be changed.
Configure your FC and ESC via Bluetooth!
With SpeedyBee app, turn your phone into an all-in-one fc configurator and tune your quad anytime, anywhere. Enjoy wireless, fully configurable ESC experience with SpeedyBee app
ESC upgraded to 60A with heat sink.
The PCB design has been refined, with copper thickness increased from 2 to 3 ounces and enhanced MOSFET specifications. Continuous current now reaches 240A across all channels, peaking at 320A for 10 seconds. An added aluminum alloy heat sink ensures efficient MOSFET heat dissipation for stable ESC output. It delivers a genuine 60A output, primed for your baddest high-powered 6S motors.

ICM42688P Gyro and clean power supply.
Featuring MaxLinear's esteemed LDO power chip, the gyroscope gets dedicated power, enhancing surge protection by 300%. A 100uF filtering tantalum capacitor shields gyro data from power interferences. This ensures precise flight responsiveness, letting you truly savor the joy of flying!
100uF Tantalum Capacitor

Forgot your LiPo checker? Just look at the FC!
On the side of the flight controller, you will find a 4-level battery capacity indicator. As soon as you connect the battery, you can instantly see the battery level, saving you the hassle of needing to put on glasses to check the battery status.
* 1 LED solid: Battery level 10-25%
1 LED blinking: Battery level < 10%
SD card compatibility issue fixed!
The F405 V3 FC faced compatibility issues with certain microSD cards, with a few even occasionally affecting the stable OSD display. The improved F405 V4 flight controller, however, addresses these challenges. It reliably supports C4, C6, C10, and higher cards at 2k/4k logging rates.
BF/INAV can recognize up to 4GB of black box space. Once you clear the SD card, you can enjoy 1000+ flights. Experience black box freedom like never before!
